CATHTONG® II

Peripherally Inserted Central Catheter

The CATHTONG® II PICC line is intended for short or long-term peripheral access to the central venous system for infusion, intravenous therapy, blood sampling, power injection of contrast media, the administration of fluids, medications and nutrients, and allows for central venous pressure monitoring. The CATHTONG® II PICC Catheter is designed for a wide range of applications such as blood transfusion, chemotherapy, interventional radiology, and many more.

Dual Lumen

The dual lumen design allows for the use of two types of therapies simultaneously without having to insert multiple catheters. Additionally, CATHTONG™ II features various lumen diameters to provide a wide range of flow rates.

Power Injection

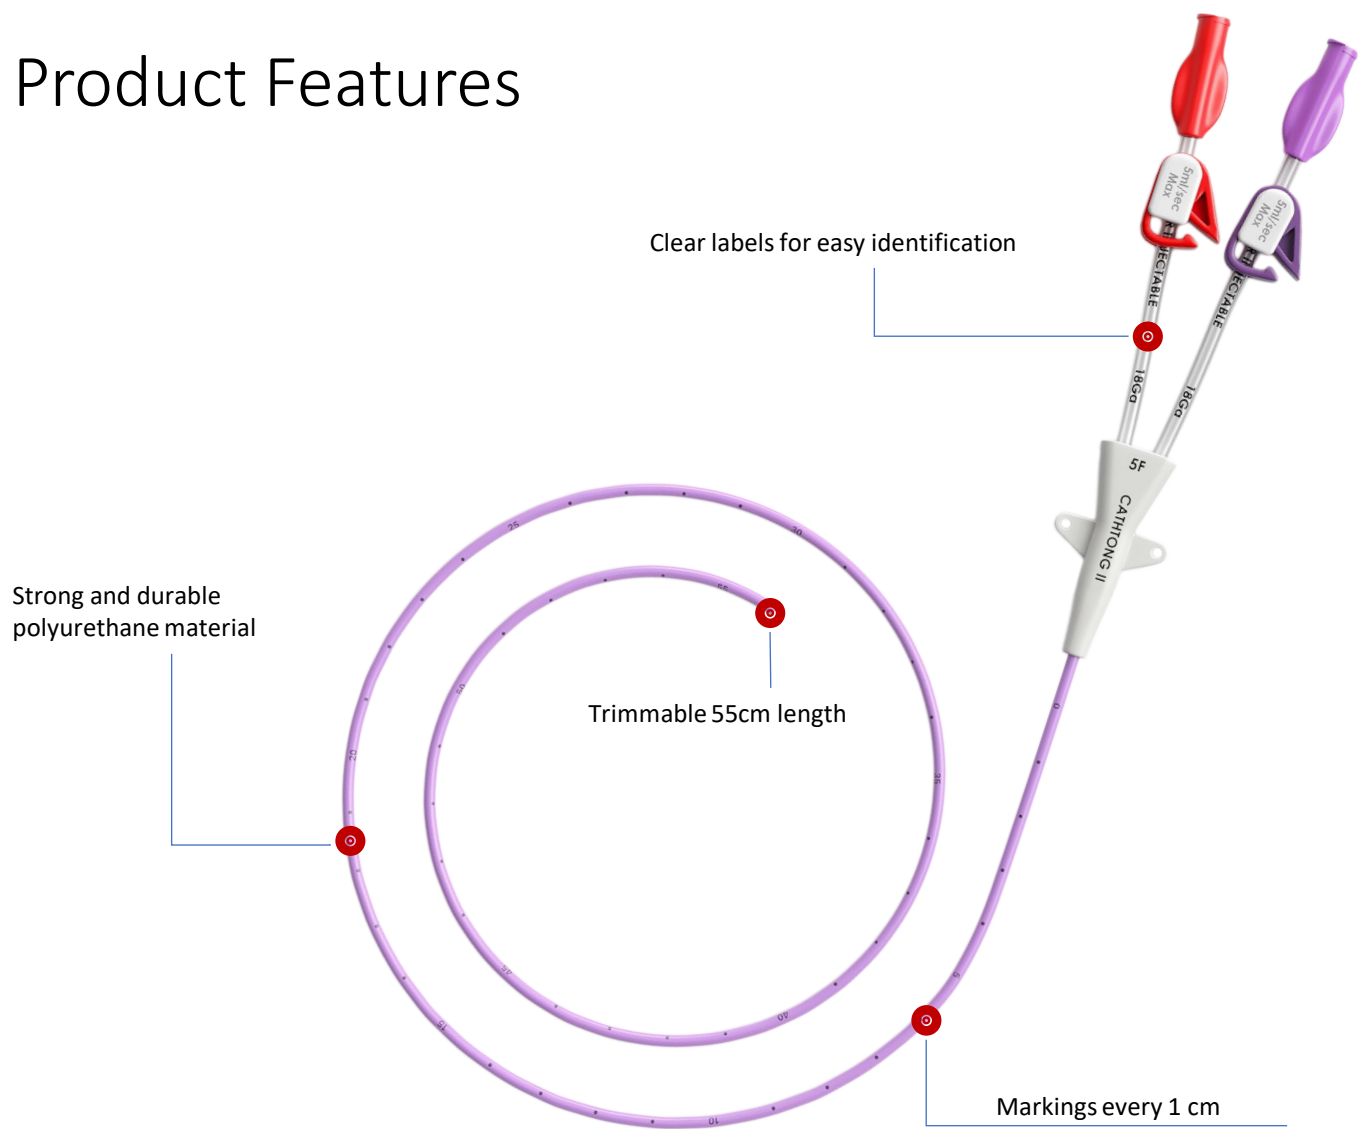

The CATHTONG® II Catheter is designed with Power Injection capability. Power Injection allows for the injection of contrast media at a rate of 5.0 mL/sec. This feature allows the PICC line to be used for Contrast-Enhanced CT (CECT) Imaging.

Why the PICC?

- Patient Comfort—Less “needle sticks”
- Long-term Use—Can be in place for weeks or months
- Versatile Facility—Once inserted, it can be used in the hospital, clinic, nursing facility, and at home
- Safety—Low risk of infection and low chance of irritation to veins and vessels

Product Features

Catheter Comparison

Applications	Catheter Types			
	IV Catheter	Midline	PICC	Power-Injectable PICC
Blood Transfusion	✓	✓	✓	✓
IV Therapy	✓	✓	✓	✓
Total Parenteral Nutrition		✓	✓	✓
Chemotherapy			✓	✓
Antibiotic Therapy			✓	✓
Contrast-Enhanced CT Imaging				✓

PICC Kit Components

Our PICC lines are included in a kit that contains accessories to aid in the PICC insertion procedure.

- PICC Line w/ Stylet
- Catheter Stabilization Device
- Information for Use
- IV Catheter w/ Needle
- Safety Scalpel
- Introducer Needle
- Micro-Access with Dilator
- Guidewire
- Microclave® Connector

Microclave® is a registered trademark of ICU Medical, Inc.
